Testimonial for Penn Valley Contractors, Inc.

Penn Valley Contractor's designed and completed an 11,000 square foot addition to our existing 25,000 square foot facility. They were involved in every aspect from engineering and design to build and completion as well as helping navigate complex Township rules and regulations.

The entire team from Penn Valley was friendly, punctual, and hard working. They live and breathe excellence in everything they do. Integrity, initiative, and intelligence were built into this project and it was clear they kept Kampi's best interests in mind during the entire build.

Once the actual construction started, the project was completed almost a full month ahead of schedule. That is a credit to both Penn Valley and their many highly skilled contactors and tradesmen. Also of importance is even with the numerous in-process modifications/change orders we initiated, the project still came in under budget.

The on-site supervisors were in constant contact with me and my team every step of the way. I was consulted and guided throughout. The end result is a building I am both proud of and that exceeds our expectations. Quality, performance, and organized are more words I will use to describe Penn Valley.

Also to be noted is that I am firm in the belief that should any problem arise, the good folks at Penn Valley would be here to help correct whatever issue there might be...even if it's down the road.

I would like to thank Mr. Otto and his entire team for helping us choose the right materials and allowing us to operate while the construction was on-going. As a "vital and essential" defense contractor, it was most important that we had as few disruptions as possible while remaining open for business.

In closing, the best testimonial is the willingness to recommend Penn Valley Constructors as a qualified company for any potential project, large or small, and I can do that whole heartedly and without any reservations whatsoever.

Al Goodman
