

Penn Valley Constructors, Inc.

The construction at Barrett Asphalt involved four separate buildings, each with specific uses pertaining to the operation of the asphalt plant; a 6,000 square foot maintenance building (as seen below), a scale house, a masonry one-story lab building and a two story office building with full perimeter strip windows on both floors for a panoramic view of the entire plant. This office building also features an Exterior Insulation and Finish System (EIFS), which was used to provide superior energy efficiency and much greater design flexibility.
